SUMMARY

Full-stack engineer with experience across backend architecture, frontend systems, APIs, containerized deployments, and production infrastructure, owning products from 0→1 development through production.

EDUCATION

BITS Pilani

2024 – Expected May 2027

B.Sc. in Computer Science

EXPERIENCE

Omium (The Residency SF, Spring 2026)

Jan 2026 – Apr 2026

Founding Member

- Built the full-stack product architecture for an AI agent observability and reliability platform.
- Developed dashboard workflows and reusable interfaces for inspecting agent executions, traces, and failure states.
- Connected dashboard views to backend APIs, handling data loading, execution status, and error responses.
- Debugged frontend, backend, and API integration issues across agent-monitoring workflows and production services.
- Optimized rendering and page performance, achieving a Lighthouse score of 100 on key pages.

Ghostlytics Payment LLC (MegaLLM)

Oct 2025 – Jan 2026

Founding Member / Junior Product Manager

- Led early full-stack product development for a unified LLM API platform spanning user interfaces and backend integrations.
- Built developer-facing interfaces for model access and connected application workflows to backend APIs.
- Implemented and debugged API integrations, tracing errors across client requests, backend services, and model responses.
- Managed engineering workflows, reproduced defects, and coordinated technical fixes and releases to improve API reliability.

Matiks Mental Health Private Limited

Jul 2025 – Sep 2025

Full-Stack Developer Intern

- Built backend services using Go, TypeScript, and MongoDB for production application workflows.
- Implemented real-time chat using WebSockets to support live user interactions.
- Developed a daily activity system with streak tracking and persistent user progress.
- Designed and integrated APIs across application services, connecting backend functionality to user-facing features.

FindMyVakeel (Incubated by Founders Forge)

Feb 2025 – Sep 2025

Co-founder & Product Engineer (Part-time)

- Built a full-stack platform that connects startups with lawyers based on their specific legal requirements.
- Designed backend architecture and application workflows to capture legal needs and support startup-lawyer matching.

PROJECTS

AlgoWars – Competitive Coding Duel Platform

Live

Co-founder / TypeScript, Next.js, Hono, PostgreSQL, WebSockets, Cloudflare Workers

- Built real-time 1v1 coding duels with matchmaking, timed rounds, Elo ratings, and reconnection handling.
- Integrated asynchronous Judge0 execution and live verdict updates through WebSockets and Durable Objects.
- Used PostgreSQL transactions and conditional state updates to prevent duplicate match results and Elo updates.

PodsML – AI Agent & Sandbox Deployment Platform

Live

Co-founder / Next.js, Docker, Linux, Pelican/Wings, Cloudflare Workers

- Built a multi-node platform for deploying isolated AI agent sandboxes and game servers using Docker and Pelican/Wings.
- Implemented authenticated REST and WebSocket APIs for provisioning, browser terminals, file management, and live metrics, routing container operations to the correct node over Tailscale.
- Built usage metering, credit balances, and Dodo Payments billing with idempotent webhooks, plus a model gateway for chat, speech, image generation, and search.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Go, Python, SQL

Web: React, Next.js, Node.js, Bun, Hono, REST APIs, WebSockets, Socket.IO

Data: PostgreSQL, Drizzle ORM, MongoDB, Redis, SQLite, Supabase

AI Systems: LLM APIs, model gateways, AI agents, tool calling, MCP, speech/image generation, search APIs

Infrastructure: Docker, Linux, Cloudflare Workers, Durable Objects, Pelican/Wings, Tailscale

ADDITIONAL

- Qualified Scaler NSET 2024 with a 100% Learnability score.
- Worked with early-stage clients including tasadezy.com and healthnivaran.in.
