SUMMARY

Full Stack Developer and early operator who helped scale two 0 to 1 products (one to 190k users). Earlier at a The Residency SF'26 company. Comfortable owning backend systems, frontend architecture, product, and GTM simultaneously.

EDUCATION

BITS Pilani

B.Sc. in Computer Science

2024 – Expected May 2027

EXPERIENCE

Omium (The Residency SF Spring'26)

Jan 2026 – Apr 2026

Founding Member

- Joined as an early operator at 0 and built the complete frontend architecture from scratch
- Optimized performance and SEO achieving Lighthouse score of 100 and improved discoverability across key pages
- Built and executed GTM pipelines driving early user acquisition through Reddit and X distribution
- Owned product and frontend while coordinating closely with backend systems during early-stage scaling
- Assisted in backend debugging and system-level issue resolution during early-stage scaling

Ghostlytics Payment LLC (MegaLLM)

Oct 2025 – Jan 2026

Founding Member / Junior Product Manager

- Helped scale MegaLLM from 0 to 190k users through rapid iteration and distribution
- Led frontend development in early stages and later transitioned into product and team management responsibilities
- Managed engineering workflows, handled bug triage across frontend and backend, and improved API reliability
- Collaborated closely with cross-functional teams to ship features quickly in a fast-paced environment

Matiks Mental Health Private Limited

Jul 2025 – Sep 2025

Full Stack Developer Intern

- Built a daily engagement system with streak tracking to improve user retention and consistency
- Implemented real-time chat features using WebSockets enabling seamless user interaction
- Built backend services using Go, TypeScript, and MongoDB focusing on performance and scalability
- Worked on API design and integration across multiple services in a production environment

FindMyVakeel (Incubated by Founders Forge)

Feb 2025 – Sep 2025

Co-founder & Product Engineer (Part-time)

- Built a system that helps startups connect with lawyers based on their specific legal needs
- Led product development and backend architecture in a 0 to 1 environment

PROJECTS

AlgoWars – Competitive Coding Duel Platform

Live

System Design, Backend Architecture

- Built a real-time coding duel platform with matchmaking and rating-based logic
- Designed backend architecture for scalable problem distribution and concurrent matches
- Focused on low-latency interactions and real-time execution environment

Pods.ml – AI Agent & Game Server Deployment Platform

Live

Next.js, TypeScript, Pelican Panel, Wings

- Built a deployment console for launching AI agents, sandboxes, and game servers
- Integrated Pelican Panel and Wings for server provisioning and lifecycle management
- Implemented authentication, billing, per-pod subdomains, an in-browser terminal, and live resource metrics

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Go, SQL

Backend: Node.js, Express, MongoDB, Redis

AI: LLM APIs, AI workflows, prompt engineering

Tools: Git, Docker, Postman, Vercel, Render, Fly.io

Concepts: API Design, System Design, Performance Optimization, SEO

ADDITIONAL

- Qualified Scaler NSET 2024 with 100% Learnability score
- Worked with early-stage clients including tasadezy.com and healthnivaran.in
